SUMMARY

Senior engineer with six years of experience spanning full-stack application development and cloud infrastructure. Proven track record building production systems end-to-end in Ruby on Rails, React, Python, and Go, and operating them on Kubernetes, Nomad, and major public clouds. Strong background in CI/CD, infrastructure as code, observability, and platform reliability.

TECHNICAL SKILLS

Languages: Ruby, Python, JavaScript/TypeScript, Go, C++, SQL, Bash, Lua

Cloud & Infrastructure: AWS, GCP, Azure, DigitalOcean, IBM Cloud; Kubernetes, Nomad, Docker, Terraform, Ansible, Helm, Consul, Vault

Observability & CI/CD: Datadog, Grafana, Prometheus, ELK, Jaeger, Istio; Jenkins, GitHub Actions, GitLab CI

Frameworks & Libraries: Ruby on Rails, React, SolidJS, Django, Flask, Express, Kafka; PyTorch, TensorFlow, scikit-learn, OpenCV, Pandas, NumPy, Spark

Networking: MikroTik (RouterOS), VLANs, firewall and routing policy, Juniper

EXPERIENCE

Senior Software Engineer

Jan 2024 – Present

Vokol

Remote

- Designed and shipped a multi-tenant, HIPAA-compliant efax platform end-to-end in Ruby on Rails with a React frontend
- Delivered real-time fax status updates via ActionCable and asynchronous OCR and extraction workloads through Active Job backed by SolidQueue
- Architected an AI document-understanding pipeline pairing a self-hosted OCR model with multiple LLM providers, including provider routing, fallback, and schema-validated structured outputs
- Built and operated a self-hosted Nomad cluster as the production runtime, with Consul for service discovery and Vault for secrets management
- Established GitHub Actions CI/CD pipelines for application and infrastructure deployments into Nomad
- Designed and implemented the network layer on MikroTik, including VLAN segmentation, routing, and firewall policy to isolate production workloads

Site Reliability Engineer

Feb 2022 – Jan 2024

Deloitte

Remote

- Managed multi-cloud infrastructure across client engagements using Terraform, including a reusable module that provisioned EKS on AWS or AKS on Azure and integrated with shared networking and database modules
- Built Jenkins CI/CD pipelines and maintained hardened Linux AMIs for EC2 fleets, standardizing deployment across environments
- Deployed Istio service mesh to secure microservice traffic, and exported mesh and Prometheus metrics to power custom SLO dashboards
- Instrumented AWS Lambda functions with a Datadog layer, built APM service maps, and codified Datadog service definitions and SLA alarms in Terraform
- Integrated multiple identity providers into a React frontend, delivering enterprise SSO via SAML federation for a new ecommerce product
- Led incident response on a production database failure, restoring from backups and architecting a multi-AZ RDS topology to prevent recurrence
- Stood up an analytics database for BI, automating anonymization of protected fields so reporting workloads no longer impacted production
- Authored automation for database backup and restore procedures, reducing manual operational toil

DevOps Engineer

Jan 2021 – Jan 2022

Blue Apron

Remote

- Migrated development environments from cloud to on-premise Kubernetes clusters, reducing infrastructure spend while improving iteration speed with Scaffold-based workflows
- Built new CI/CD pipelines targeting the on-prem clusters and contributed to a Go service that automated port configuration on Juniper network hardware
- Co-authored the disaster recovery and chaos engineering plans, validating service resiliency through scheduled fault-injection exercises
- Participated in on-call rotation, leading recovery efforts during production incidents

DevOps Engineer

May 2020 – Jan 2021

Active International

Remote

- Owned all Kubernetes environments and the infrastructure provisioning that supported them
- Optimized MongoDB queries through parallelization and custom indexing, improving data-fetch performance by 10x
- Migrated legacy on-prem SFTP servers to Azure Blob Storage, retiring aging hardware
- Built CI/CD pipelines for Python web applications and produced cost-management and forecasting reports for leadership

PROJECTS

Claude Code Fleet Manager

2025 – Present

SaaS Platform

Go, Rust, PostgreSQL, WebSockets

- Designing a multi-tenant SaaS for orchestrating fleets of Claude Code agents across remote hosts, with a Go control plane and a per-host Rust daemon
- Built a pull-based task queue over PostgreSQL (`SELECT FOR UPDATE SKIP LOCKED`) with WebSocket push, lease heartbeats, and automatic re-issue on host failure
- Implemented declarative state reconciliation: the daemon converges `~/ .claude` on each host to a server-pushed manifest (settings, MCP servers, skills, hooks, credentials), reporting drift back to the control plane
- Implemented OIDC device-code authentication with refresh-token rotation, OS-keyring storage, and an opt-in WireGuard mesh for secure cross-host control without exposed ports
- Added a multi-tenant AAA mode that provisions per-operator home directories and injects session-scoped PATs into spawned Claude processes
- Shipped Debian, RPM, and Alpine packages with systemd and OpenRC units, plus Prometheus metrics and an OpenAPI spec generated from the Rust types

C++ Package Manager

Nov 2023 – Present

Open Source

C++, Lua, CMake

- Developed a dependency manager for C++ projects with a Lua-based configuration model
- Implemented a CMake-driven build pipeline for compiling, linking, and packaging projects

Neovim LSP Plugin

Aug 2022 – Dec 2022

Open Source

Lua

- Built a Neovim plugin providing Language Server Protocol integration with a streamlined configuration interface
- Designed a Lua-based configuration system to simplify per-project server setup

EDUCATION

Western Governor's University

Salt Lake City, UT

B.S. in Cloud Computing

Dec 2020 – Sep 2024

Milton Hershey School

Hershey, PA

H.S. Diploma

Sept 2012 – June 2016

CERTIFICATIONS

- AWS Certified Solutions Architect
- AWS Certified Cloud Practitioner
- CompTIA Cloud+
- CompTIA Network+
- CompTIA Project+
- CompTIA Security+
- CompTIA A+
